

AIB™ vet

The Avian Immuno Booster

Composition

Unique combination of Lysozyme Hydrochloride, MOS, β -Glucan, Vitamin A, Vitamin C, Vitamin E, Zinc, Se & Anhydrous Glucose

Mode of Action

Lysozyme is a polypeptide enzyme consisting of 128 amino acids cross-linked by 4 disulfide bridges. It is known to degrade the polysaccharide architecture of many kinds of cell walls. It is a ubiquitous enzyme found in animal tissues, organs and serum, tears, milk and cervical mucus. Lysozyme attacks peptidoglycans (found in the cell walls of bacteria) & hydrolysis of linkages between N-acetyl muramic acid & N-acetyl-D-glucosamine as well as thus killing of bacteria.

Mannan oligosaccharide (MOS) binds with threadlike fimbriae on pathogenic bacteria thus prevents bacteria from attaching to the gut wall & averting bacterial stabilization, colonization and multiplication

Indication

AIB vet is indicated for the followings:

- ✓ Brooding
- ✓ To increase immunity
- ✓ To potentiate vaccine efficacy
- ✓ To improve gut health & efficiency
- ✓ Supportive treatment of Necrotic enteritis, Colibacillosis & Salmonellosis
- ✓ To reduce any stress

Dosage & Administration

1gm/1-2 Liter drinking water

Or, as per direction of registered Veterinarian/poultry consultant

Contraindication

None

Side effect

None

Drug interaction

None

Withdrawal period

None

Storage

Store below 25 °C temperature. Keep away from light and wet place. Keep out of reach of children

Supply

10gm X 10's & 100 gm

Animal Feed Premix
